

MOE'S COOKING AND REHEATING LOG

IMPORTANT: This log must be filled out every time chicken or steak is cooked. This is non-negotiable!
HACCP: COOK RAW CHICKEN TO AN INTERNAL MINIMUM TEMPERATURE OF >165°F FOR 15 SECONDS
HACCP: COOK RAW STEAK TO AN INTERNAL MINIMUM TEMPERATURE OF >158°F FOR 15 SECONDS

INSTRUCTIONS

1. Cook the protein to the specs stated in the applicable recipe.
2. Identify the thinnest piece of cooked protein. Lift the protein using a yellow or red handled food turner.
3. Insert the thermometer in the thickest part of the protein at a 45° angle. When chicken is above 165°F or steak is above 158°F remove from the grill or oven.
4. Continue taking temps, (thinnest to thickest) until you've reached the final, thickest piece. Note the temperature of that piece.
5. Log the time, indicate the type of protein, log the internal cook temp of the final piece, log your initials.
6. If the protein temps below the desired temperature, cook the protein in 1 minute increments until above the desired temperature. If using a clamshell grill, leave the lid UP. Log the corrective action taken (note: additional cook time), along with the final temperature of the protein in the Corrective Action box.

IMPORTANT: This log must be filled out every time product is reheated (Queso, Soup) This is non-negotiable!
HACCP CCP: REHEAT PRODUCT TO 165°F FOR 15 SECONDS IN LESS THAN 2 HOURS

INSTRUCTIONS

1. Cook the product to the specs stated in the applicable reheating recipe.
2. Log the start time, indicate the type of product, log the internal cook temperature and time it took to reach 165°F, log your initials.
3. If the product temps below 165°F, continue reheating in 5 minute increments until above 165°F. Log the corrective action taken, along with the final temperature of the product in the Corrective Action box.
4. If the time to reach 165°F exceeds 2 hours, discard the product and record that as the corrective action taken.
